

HYPOPHETIKON

OR

An Astrological Prediction
Of the Various Changes likely to
occur in most Parts of *Europe*
this present Year

1658.

From the Manifold Passions and Positions
of the Cælestial Movers, viz. the
Sun, Moon, and Planets.

Together with a succinct Chronologie of
The most Remarkable Accidents that have
happened in this Island of *Great Britain*,
since the Commencement of our late
Interline Divisions.

With the Rising and Setting of the Moon
and many other necessary Rules and Obser-
vations, not commonly found in
Works of this nature.

Respecting the Meridian of the famous
University and City of OXFORD,
Whose latitude is 51 d. 42 m.

By JOHN GADBURY Φιλομαθηρικός.

*Cælum instar libelli expansi est, notis Syderum omnia futura in
se scripta continentis.*

Londæ Printed by W. Gold for the Company of Stationers.

TO THE
Truly Ingenious and faithful
 Favourer of *Learning*,
WILLIAM BATTINE
 of *Ringwood* in the County of
Southampton E S Q U I R E.

JOHN GADBURY, In Testi-
 mony of the Honour and Respects he
 bears (as standing within the Orbs of Re-
 lation to) him.

Wisheth all Happiness and increase
 of Dayes, and humbly presenteth
 these his **ASTROLOGICAL**
 Labours.

The Booke explained.

Every Month contains two Pages ; a Right, and a left.

The left hand Page explained

THis Page consists of six Columns. The first contains
 the Month days. The second the week dayes. The third,
 the fixed and moveable Feasts. The fourth, the *Moons* place in
 deg. and min. The fifth, the *Suns* place in deg. and min.
 The sixt holds the mutual Aspects, and change of Aire.

The Right hand Page explained

This Page consists of five Columns. The first holds the
 dayes of the Month. The second, the *Moons* rising. The
 third, the *Moons* setting. The fourth, full Sea at *London-*
bridge. The fifth, a Chronologie of the most remarkable pas-
 sages perpetrated in *England*, since the year, 1640. with
 the precise dayes and years they happened on.

Some vulgar Notes explained.

January hath xxxj dayes.

Had I *Domingo's* skill, then would I go
To th' sky, and see what *Jove* and *Venus* do;
I'de search the Orbs to find the subtilty
Of *Pyrois*, who with them both comply:
I'de storm *Sols* mansion too, but that I see
None without *Ganza's* canto *Heaven* flee.

February hath xxviii Dayes

The Lawyer and the Politician joyn,
 Their Stars salute each other by a Trine,
 Grim Chronus courts fair Aphrodite, and she
 (By Mars his jealousie) is forc't to flee
 For safety, under loves illustrious wing;
 While both with Hermes, usher in the Spring.

March hath xxxj dayes.

Just as the Lamp of heaven mounts the Ramme,
 Refulgent *Jove* unto his *Square* doth come,
 And sullen *paivon* from the ballance Bright
 Opposes him, and *Modest Aphrodite*;

(Which unto *Europes* choise-men) ill Presages:

Why should not those that work ill, have ill wages?

April hath xxx dayes.

Now flow-pac't *Chronus*, and his Counsellor
Call Theevish *Stilbon* to th' offenders Barre ;
But he, being under *Mars* his Tutelage
Denies their Power, and disdains their Rage ,
As who would not ? what need those *Men* appeal
To *Law*, or *Chancery*, that bear *Mars* his Seal ?

May hath xxxj dayes.

At the beginning *Jove* and *Mars* do joyne
And th' other four most lovingly do *Time* ;
The two *Milignants* wrangle hard, and in
Two-Tropique-Signes their *Quarrel* do begin.
If Scottish *Villanies* be brought to light
And *Punished*, then say I've spoken right.

June hath xxx days.

The Stars do but incline, cannot compel,
As all the Learned Gymino Sophists tell;
Which, if 't be true, the bad this Month portended,
May (by the Prudent) soon be countermanded:
For *Jove* and *Venus*, in *Conjunction* move;
To fill the *Land* with peace, Mens *Hearts*, with love.

July hath xxxi days.

Now for a deep-dipt-pen that truly can,
Foretell what *Chronus* and his serving-man,
By *Quartile* are plotting; *Hermes* uses
His Nimblest speed, to tell *Jove* what the *News* is:
Jove slights the plot, restrains his liberty:
Would all *Informers* were serv'd so, (for me.)

Aug. hath xxxi days.

Rejoyce, thou painfull Reaper, sing for joy!
The Stars their beauteous Banners do display,
In glorious sort: harmoniously they sing;
To usher this, thy happy Harvest, in.
Use thy crook & Razer [nimbley,] and refrain
From sloth; for at the end o' th' Month comes Rain.

September hath 30 days.

In the beginning of *Astrea's* sign,
The *Souldier* and the *States man* mildly joyn;
And thence emit their sparkling Rays to *Jove*,
Who suffers by ill News, and Womens Love.
A certain Truth! when Justice courts the Lion,
The Brethren would be thought the sons of *Sion*.

Sr. W. Rawleigh beheaded.	40		
A Comet in Scorpio.	40		
King James dyed.	34		
A great Plague in London.	33		

To the Reader,

I Have in my Books for former years (as also in my *Cælestial Ambassador*) not onely Asserted, but Evinc'd the *validity and Excellency* of the *Syderal Science*: which *Ptolemy* affirmeth to be the *only way and path* to the knowledge of God; in the beginning of his *Almagest*.

In my *Speculum* for 1656. I proved the truth thereof from the wo'ull and dear purchased experience of many thousand of poor *English* souls, since the Commencement of our late *Intestine Divisions*: and shewed the *concordancy* of the *Accidents* happening here on earth, with the *various configurations, passions, positions* of the *Stars* and *Planets* in *Heaven*.

And, in my Book of the last year, viz 1657. I largely predicted the divers kinds of *accidents*, that (according to *natural Causes*) were then probable to invade most of the *Nations* of *Europe*; which, how true they have fallen out, I had rather, those who have been *Actors* in the dismal *Tragedy* of *Europes* woes should relate, then my self write.

In my *Cælestial Ambassador* (published in 1656,) I have given an *Astrological Judgement* on the *Grand Catastrophes* and *Contingencies* likely to occur in most of the *European Countreys* for neer fifty years yet to come. And as my *theam* was large, viz the many *Conjunctions* of the *Planets*, in September 1656. my observations were the more Copious: yet for satisfaction to all, have I given reasons in Art, for those my predictions (a thing not very frequent among *Artists*) and for the ready understanding thereof (even by an *ordinary capacity*) I have digested my *Judgements* into *Articls*, highly presuming it will not only be found the more *pleasing and delectable*, but *profitable*.

Now, having taken this (not ordinary) pains, if any *Antagonist* shall seem dissatisfied, and question the certainty of this *Learning*; I shall refer him to the 40. and 41. pages of

To the Reader.

of that Book; where (if he be not blinded with partiality and prejudice) he may see, that the two last years actions of France and Spain have exactly corresponded with those my Predictions: And this, not in a Diminutive, but very large sense; then the which, what can be more plain, to evince the credit or certainty of an Art?

But, notwithstanding the manifold verities that are daily produced, not only by my self, but by many others herein; yet have we a brood of home bred Antagonists, and Brutish Sycophants, who most maliciously scandalize, both the Art and professors thereof; when alas! not one in forty of the poor animals, know, what *Αστρολογία* (i.e.) *Sermo de Astris*, or, the Speech of the Stars, means. They poor ignorant Thrasos! have a kind of envy against something, but they know not what; like the Clown in the Comedy, that was deeply in Love, but knew not with whom.

Impedit ira animum ne possit cernere verum.

By wrath is hindred is the mind,

That Truth it cannot see, or find.

I could particularize the malice and madness of some, who (it may be) would blush and fume, to have their ignorance divulged. But I will pretermitt it here; and mildly tell the squint-eyed Antagonist, it is not fair, for any man (be he never so well qualified or conceited) to stigmatize an Art he is unskilled in; or, to reproach an Artist, unless he know certainly, his practices notoriously sufficient to prove him guilty. *Cæcus de coloribus ne iudicet.* The blind can never judge truly of colours. Nor, can any unskilled in an Art be a competent Judge of an Art.

Most true it is, this Art is known unto but a few; but this is not an argument of the evil, but the excellency of it. *Non datur omnibus*, it is not given to all men, to be acquainted with Art. As Seneca said of Humane matters excellently. (*Non tam bene cum rebus humanis agitur, ut melius pluribus placeant; Argumenti pessima turba est.* It goes so well with the affairs of men, that the choicest thing should please the most. The multitude is an argument

To the Reader.

of the worst. So may I, of this illustrious Learning! Men have not so glorious a Crown bestowed on them, that they should generally be blessed with the best and choicest Sciences: The multitude, the Rabble-Rout of Rural wretches, (Dull souls!) must lie groveling in the Rock of Folly, Envy, and Malice, while the most honourable and Glorious Arts, in their Meridian lustre, pass by them unseen. And it is an unalienable truth, the multitude is an Argument of the worst.

But, *cui fini?* To what end, trouble I my self thus far? were I able to make this Art appear in its greatest splendor and glory; and to unfold all the Enigmatique wonders, that are wrapt up in it, and to pave the way unto it, with *Διαφανής*, Transparent and convictive verities: that the passage to its knowledge were as clear, and conspicuous, as the Radiant Lamp of Heaven in his greatest lustre: yet would there appear some Beef-brained beasts, and Bedlamers, who would endeavor to insatiate the generality of the world, with their pretended scurrile exceptions. Albeit they are not able to render the hundred part of a wise reason for their impudent and arrogant assertions.

But, I will stir this stinking puddle no more at this time, referring the ingenious to the tryal of those truths which are daily, made good in *Generalibus Accidentibus Mundi*, or in *Γενεθλιαλογια* the Geneblical part of Astrology, they being sufficient to convince any reasonable or knowing man.

For the blundering *Ζοίλος*, or *Carpor*, I shall leave to bug his fond and frivolous conceits and fancies, as the *Απε* doth her young ones in the Fable; untill he be even scorned and derided by God and Man.

As there was a *Picus* that wrote against Astrology, so there was a *Bellantius*, that met with him; and to prove Astrology a real Art, (and that by his own Nativity) predicted his death, which came to pass accordingly in the 34 year of his age.

And did not Luther finde a *Melancthon*? And *Chambers* a *Hejdon*? surely yes! and I would ask of *Astrologia* *arabica*

To the Reader.

enemies, what Honour, Gataker, Gaul, Homes, Rowland, Vicars, &c. have gained by their inveteracy and malice; and whether the names and memories of those men, which once were accounted venerable, do not now stink in the very nostrils of all sober and well minded Christians?

Astrology (like Christianity) hath suffered many fiery, and bloody persecutions; yet, as the Camomel, or Palm-tree, the more it hath been depressed, or kept under, the more it hath flourished. And God hath raised up in all ages some undaunted and generous Spirits, to vindicate that Science, the knowledge of which cometh sooner Himself; which very consideration were sufficient (it weighed in the balance of Reason) to convince a Legion of Antagonists of the validity and purity thereof; and of its miraculous preservation by Gods most blessed providence?

John Cadburie.

Of Eclipses this year 1658. and what an Eclipse is?

AN Eclipse is a privation, or want of Light, in an opacous or dark body, which at sometimes is affected by a Luminous body; therefore of the Greeks is termed *Εκλειψις ἀπὸ τοῦ ἐκλείπειν*, quod est *acessere*, a wanting, waining, falling or obscuring.

And this (for our purpose) in the opacous bodies of the earth and moon; but more improperly (and yet more commonly) observed of the Sun. Whereas, it is impossible for a luminous body, (and such is the Sun) to suffer either a privation or obscuration.

For light is the very essence of the Sun, and no other body, whatsoever (I mean in nature) can be called, *Lux* *non di* but he.

Gadbury, 1658.

He is indeed, *Lux admirabilis*, a wonderfull light; and in a wonderfull manner, according to the admirable wisdom of an All-wise God, is placed, in the midst of the other Planetary Orbs, that he may communicate light unto them the more conveniently; and all other lights, are but dim (if any at all) compared to him.

But, some may object and say, did not God create two Great Lights, Gen. 1. the one to Rule the day, the other the night? &c. and were not these two great lights the Sun and Moon? how then comes it to pass that the Moon is (as you say) *opacum corpus*, an opacous or dark body?

This, I confess, is the common objection that every Objector gets by the end; and it the ignorant can get but a little Scripture, which they think favours them, although they understand not the meaning thereof, they deem him that opposes them, no less then *Αἰρετικός*, or *Aless*, an Heretick or Atheist, when it is plain they themselves, are the greatest Hereticks, & the greatest Atheists, in that they so manifestly abuse the Scripture, which they understand not, and by consequence most impudently oppose the glorious truth.

Know sullen Zola, Scripture was not given,
For you to know, how many Lamps of Heaven,
Have proper Light; nor yet, to teach us Arts,
But it was writ to redress our hearts.

The supreamest *ΤΡΥΤΗΣ* in Scripture are wrapt up in allegories, Metaphors, Metonymies, Synecdoches, &c. so say the greatest Clerks, that ever yet expounded them. And the text mentioned in the objection, may be understood, either by a *Συναγωγή* Synecdoche, or *Μετωνυμία*, Metonymie, and both proper.

1. It may be understood by a Synecdoche, where the singular is put for the plural, as *Δύο πρόυνα*. God made two Great Lights [for one Great Light] the Sun and the Moon [for the Sun only.] And this may appear plainly by other places of Scripture, where the Holy Ghost commonly uses this phrase or manner of speech. As in Gen. 21. 7. Who would have said that Sarah should have given children suck? where (by this figure) children is put for child. For Sarah.

Sarah gave suck to none but Isaac, as Scripture teacheth. And again, in Judges 12.7. Jephtha was buried in the Cities of Gilead, where Cities is put for City, unless we shall incongruously conclude, that the body of Jephtha was mangled and cut to pieces, and buried in several places. But this were to mangle the sense of the text. Again, in Mat. 27.44. The Thieves which were crucified with him, upbraided him, i.e. one Thief only, for the other, cried, Lord, remember me, &c. So in this text, of Gen. 1. God made two great Lights, viz. the Sun and Moon: for the Sun only, for the Moon is but a glass to receive the reflection of the Sun, and of her self, hath no light.

Thus, the plural is put for the singular, and may very properly be so taken, without infringing the truth of the Scripture, or injuring the intent of the Holy Ghost.

2. It may be understood by a Metonymie where the opaque or dark body of the Moon, is put for the light she (sometimes hath or) receiveth from the Sun. As the cup is frequently put for the wine, that sometimes is therein; or the purse for the money, that it often contains. But as the cup may be, and is often without wine, and the purse without money: so the Moon is often (viz. once a month) without light.

This manner of speaking is frequent in scripture also: take one place for all, Mark 1.33. And the whole City was gathered together at the door: where it is plain, the City is put for the inhabitants thereof.

And it is common, and a thing very ordinary both in scripture, and other writings to finde the subject put for the adjunct, or that unto which a thing belongs, for the thing itself.

Besides, we see it apparently true the Moon every month increaseth and decreaseth in light; which uncontradictably proves, that she, like a prudent Steward renders up her borrowed light and lustre once a month unto the Sun her Lord and master, and leaves it with him, untill he of his bounty grace her with it again: ergo, it is clear, the Moon is (really) no great light, nor of her self, any at all. And of this opinion is the learned Anton. See his Satyr of the Moon. Of

Of all the Planets, this appears most strange
In apparitions, and inconstant Change.
Sometime she like a Sythe her face doth show,
That Barbs the fields, when they uncut grow:
Sometimes again she's like a wounded Ball:
Her cramp'd Horns appear most Spherical:
Which Forms the bright Sun (Heavens imperial Star)
Prints in her pale cheeks with his Golden Car.
Sometimes approaching with his stately head
But once a Month, Lord-like his Ladies bed.

And Dubartas that Nightingale of France, evinces it more plainly: as Paraphrased by Joshua Sylvester, fol. 37. thus.

I think thy body round as any Ball
Who surerface (nigh equal over all)
As a pure Glass, no w up, and down anon,
Reflects the bright beams of thy Spouse the Sun.
For as a Husbands nobleness doth lustre
A mean born wife: so doth the glorious lustre
Of Radiant Titan, with his beams, enbright
Thy gloomy Front that SELF I hast no light.

From what hath been said, it results that the Moon and earth being opaque or dark bodies, may suffer an obscuration or deprivation of the beams of light, they sometimes have: but the Sun being a luminous body cannot.

That the Sun cannot suffer a deprivation or want of Light, I prove thus.

That body whose essence is light and heat: and whose essential properties are to enlighten and enliven the world, cannot be deprived of light. But the Suns essence is light and heat, and his essential properties are to enlighten and enliven the world: Ergo.

The Major is Abodictical. The Minor, I presume shall not very short of being so: and I believe there will hardly any be so mad of mind as to cavil at it. If the world should afford any such, I should refer the intercourse of day & night, and the vicissitudinary courses of the yearly seasons, to his or their consideration: and if that be not sufficient to evince the truth of the Minor Proposition, I dare boldly affirm, the adversaries reason hath taken opium.

Take a familiar instance, let a candle lighted be set up in

Gadbury, 1658.

a room, & it will give light round about; but if you hold your hand before the light of the candle, that part of the room will be dark which is next your hand, & yet the candle shall retain its full light. Now, there is no man in reason, can say the Candle loseth light by this accident, but rather the room.

Thus, and no other is it in Eclipses of the Sun. When the Moons dark body cometh between the ☉ and our sight directly, then is the sight of the ☉ obscured from us: and the ☉ (as the candle) still keeps and retains its splendor, and it is we that are eclipsed and left in the dark: Ergo, the earth is eclipsed not the Sun.

But in the Moon Eclipse, there is a perfect deprivation of her light which is obvious to sense. For suppose the ☉ and ☾ to be in ☿, as they are monthly, and the ☉ to communicate his light unto her in the fullest manner: then suppose the earth to come directly between the ☉ and ☾, and you will plainly perceive, the earth (it being a bigger body then the Moon) to deprive the ☾ totally of the Suns beams. Therefore the ☾ may be eclipsed, and that very proper: and the ☾ coming (in the same manner between the ☉ and the earth will cause an eclipse of the earth: but this, not so great as that of the ☾: but, for to say the ☉ is eclipsed (unless by it we stoop to vulgar apprehensions) is against common sense, and manifestly untrue: And so I come to the Eclipses this year, and they will be two, viz. both of the earth; but neither of these visible at Oxford, or in any part of England See Coelest. Logat. p. 75.

The first will be on May 1. at 14.h. 45.m. P.M. and will appear a total obscuration about the Philippine Islands.

The second happens on Nov. 1. near 1. a clock at night, and may be seen, by such people as live in the Island de les Mongos, &c. where it will be a very great Eclipse, and terrible to behold.

The famous Mathematician Argol, mentions two eclipses of the ☾, besides these of the earth, one on June 5 the other on Octob. 30. but this learned Artist was mistaken, for it is impossible that any such defect can at either of these times be, if that of Bullialdus and Sansonius be true, that if the middle place of the ☾ be distant from either her North or South Node, at the time of the ☿ 15.d. 12.m. she cannot be then eclipsed. But the middle place of the ☾ is distant above 15. d. 12.m. in both these penitunians from her Nodes: ergo, she cannot be eclipsed.

I speak not this to detract from the learned Argol, a man, unto whom Artists are much beholding, but to shew, that the best of men are but men, and so subject to error. *Humanum est errare.*

Gadbury, 1658.

Of the Spring.

The Spring commenceth, when the ☉ enters the first point of ♈, which by H.C. according to the middle time is on March 9.d. 19.h. 13.m. P.M. as appears by the Calculation thence.

Long. ☉.				Apogeeon ☉.			
Annis.	d.	m.	sec.	3.s.	5.d.	43.m.	28.sec.

This

Gadbury, 1658.

This done, I seek the degrees and minures of the Eclipse answering hereunto, under their respective elevations, which (because I will not blot paper with their operations) you shall finde in the following Figure, thus,

The fixed Stars in this Figure, are noted according to their Latitude, as I have taught in my Reduction of Hartwicks Tables.

The D in this Revolutionary Figure defluxeth a Δ \odot and \odot h and h, Lord of the 9th, 10th, and 11th. houses, and he in the 12th in ♊ , his exaltation, disposed of by \odot in ♋ , and the locally in the 12th. combust there: \odot is in the ascendant in Gemini, the house of \odot , near the \odot , with the stars of Auriga, of his own Nature. h is in ♊ with D, in the 12th in ♊ , and in ♋ to the 10th. and \odot affects the house of substance. All which in an Astrological way, speaks a de-

Gadbury, 1658.

clination of the goods of fortune: a dislike of Magistrates, and discontents between them and their Subjects: many riots and vain excesses, breeding unpleasing distempers in the bodies of men; and as the \odot is in ♋ or ♌ , and he Lord of the 8th. viz. Domo Mortis, and both of them in Cadent places of the figure, and in Cardinal Signs, they may many of them (very probably) terminate in death.

And, as the \odot and ♄ are concerned herein (although, it is true, h and D being in the 6th. threaten the Plebeians and the vulgar people, yet) Great persons are not free from these calamities, for they have significations of such. And as the \odot is in the 12th. So will Governours have many Enemies rise up against them, and many treacheries will be let on foot, I fear an apparition of more Sindercombs. Si quando \odot fuerit in 12. habebit Rex illo anno anxietates, & cogitationes magnos propter inimicos qui insurgent contra eum. saith Haly de Jud. Astr. pars 8. If when the Sun shall be posited in the 12th. the King or Governour in that year shall have very great griefs, and many perturbed thoughts, by reason of the evil enemies that shall rise against him. What is laid here of a King I would have my Countrey men of Oxford apply to chief Magistrates. Yet I would have them to know and believe, I wish them (much) better fortune, then this Aphorism of Haly speaks unto them.

I have heard some, well versed in Astrology, contend that we ought for to account a Planet Lord of a House, untill five degrees (at least) of the next sign were upon the cusp thereof, which if it be true (as I have not yet experienced) then h Lord of the 10th. is in ♊ with the Governess of the 8th. from the tenth in the sixth of this Figure, which presages according to Haly, that a Greater person, and more eminent Governour, then any in Oxford, will sustain much grief and trouble; Nay my Author says it is pernicious to the lives of those that are Governours in that Climate in which such a configuration happens. Haly de Judic. Astr. pars 8, cap. 19.

But hold my Muse, if thou the *maye* should'st strike
On th' Head, thy judgement many would dislike;
Be thou Low or bet! and speak smoother things,
For Flatteries have tickled th' ears of Kings:
But 'tis a sordid baseness! Be then bold,
And speak the truth, as Art, doth it unfold.

^{cc} Pragmatick Parasites with guidel words
^{cc} Have done the world more mischief, then *sharp* swords.

About 12. years since, a Learned Artist of Europe, of this year, viz. 1658. writes. Some great one deposed, he may be a King: or in danger of losing a Kingdom. And in another place, the same Author saith, Sores ill healed, break out again to worse ends: But I transite this Subject, referring the ingenious to my Discourse of Prodiges lately emitted into the world; where it is spoken of more largely; and hope that Englands enemies alone are aimed at.

h being exalted above the Moon in the sixth, imports many evils and sicknesses among men: much knavery in servants, and Damnum in Beasts; and much damage or loss in Beasts especially those of the smaller sort; for the sixth house is the house of small beasts. *♂* being also in the Ascendant, and in a humane sign, viz. in II, or the Twins, imports many Pickings, Quarrels, and Controversies to happen among men, generally. Haly goes further, and says, *Si quando ♂ fuerit in scendente, significat multam effusione sanguinis in illo anno.* If when *♂* shall be in the Ascendant (he is so now) he signifies, there will be much effusion of blood in that year.

But it is ♀, that is Lady of the year, and she is combust; and cadent in the twelfth house, which of the Greeks is called *Xaxo Saimon* that is, Molus Genius, or the House of the evil Spirit, or Angel; but she is in *♋*, her exaltation; yet her position under the beams of the ☉ in the 12th will abate the influence that she naturally (and of her self) is Author of.

Quando ♀ fuerit Domina anni, & debilis, & mali afflata, signif. quod annus erit omnino mendicus, & abstinebunt homines ob hila iatibus, & habebunt arctam vitam cum cogitamine & tristitia & doloribus, accident populares morbi in multis acribus, & multa pregnantur morientur ex partu, & in multis

locis

locis cadent edificia, &c. When ♀ shall be Lady of an year, and shall be weak and ill dignified (she is ill dignified now very much accidentally) that year shall be a very poor and beggry year; and men shall be enforced to abstain from *m* *h*: they shall undergo a troublesome and hard life, with many griefs and dolours: popular diseases shall be very rife in women (Venus is indeed their proper Patron) and many of them great with child, shall die in bringing forth: and in many places, houses and buildings shall fall down and be destroyed. *Vide Haly, de Iudiciis Astrorum, pars 8.*

In this Revolution we have (indeed) four Planets in their exaltations, viz. *h*, ☉, ♀, ♀, but all of them are Cadent, and Venus, Lady of the Horoscope Combust. So, that although (by their being exalted) they seem to promise much good; yet by their severall ill Locations, they will perform but little unto mankind. But besides all this, we have several other Configurations, as the ☿ of ☉ and *h*, the 24. of March, and the ☿ of ♀ and ☿ the 1. of May, and a ☐ of *h* and ☿ the 7th. of May, and a ☐ of ♀ and *h* the 18th. of the same month, &c. Why should not something of signal concernment, begin to shew it self to the world suddenly after the Revolution? the Lords of the Figure are in moveable signs, which shew quickness of Action. Nay there are severall other Configurations which are to be taken notice of, from whence the accidents of the world are to be gathered, according to that of Ptolomy. *Conjunctiones totius anni oppositionesque & quadraturas necessesse est ut consideres, per has causamur diverse transmutationes temporum, (i.e.) Consider the several Conjunctions, Oppositions and Quadratures of the whole year, for divers and sundry transmutations of the times are thence caused.*

These Configurations (I say) I should have taken notice of, as also Mars his passing by the Ascendant of the late Prodigie in Scotland: and Jupiter transiting the place, where the Comet in 1652. appeared, *Cum multis aliis*. But I am necessarily confined to this narrow scantling of Paper, and will therefore break off, while things are in different well. Should

Gadbury, 1658.

Should I but venture th' other quarter sheet
The Countryman ('tis made for) 'twould not fit.
Two pence hee't freely give: But ask him more,
Uds' lid (saith he) chil en'e ha none avore:
Chaveliv'd these vorty years, and nere did gee
A varthing more; and now d' ye think that I
Will raise the Vair! I vaith chil teese my eyes
Avore chil pay (vor Almanacks) Excise.

But now I think on't, 'is the Country buyes
My Books all up: And he is surely wise
That pleases him he gets by! I will then
Fit this my Book toth' Price of Country-men.

Thus Lawyers use to please their Clyents great:
For tis by them, they get both cloaths and meat.

The Learned Physicians, Vomit, Purge, and Blood
Their Patients, but 'tis for their own good.

Divines do speak their Auditory fair,
Because they wou'd have them return their Prayer.

The Marriner, upon the Seas is bo'd,
But 'tis in hope to Gain some Indian Gold.

The Merchant takes a wondrous deal of pain,
To please his Chapmen: But it is for Gain.

Thus Profit, men (of all degrees) do make
The only End, of what they undertake.

Why shall not I, 'cause by my Countrey Friend
I profit Gain, please him, and make
An END?

The Courteous Reader, is desired to take notice of a Sermon newly published, entituled, *Astrology proved harmless, useful, pious*; wherein is asserted the great necessity and utility of Astrology, from Scriptural Counsels, Fathers, and Reason: yea, and from the Adversaries own Arguments. It is a Learned and judicious Piece, and worthy the perusal of all ingenious persons. Sold by J. Barber, at the Lamb, in St. Pauls Church-yard.

The *Wise Mans Crown*, being a new Method of Physick; with another Treatise, entituled, *The ready way to Bliss*, are ready for public view. Also, the *Familiar Spirit*, or *Angel-Guardian*; And *Uranian Humane Pyrrus*. All pieces of excellent Learning, worthy the perusal of all sorts: They were composed by Eugenius Theodidactus.
